SUMMARY

hi i'm "piyush"passionate about solving problems through code data and web development i started my journey with simple websites using html css and js and slowly moved towards backend and database integration i enjoy the process of creating something that others can actually use over time i have explored data science as well learning how data works how insights are drawn and how models can predict things i like connecting both sides web and data to build solutions that are practicali keep learning new techs and experimenting with ideas whether its late night debugging or building a fresh project my goal is to grow as a developer who can handle both front end back end and data and to work on projects that push my limits 😊

With approximately 11 years of practice in designing, I bring a unique blend of technical and creative skills to every project. Currently, I am pursuing a degree in Data Science from IIT Madras and Mechatronics Engineering, further enhancing my analytical and problem-solving capabilities.
